

### What are biscuits?

Biscuits are small, typically round, baked products that are made from flour, butter, milk, baking powder and sugar (when sweet). Biscuits can be savory or sweet and they can also be enjoyed with toppings like butter, jam or honey.

## Application overview

# + BISCUITS

With SENSURE SYNAPSE, it is possible to **measure numerous product features** (a wide set is included in the system), such as shape, size, and colour, using **2D technologies** (industrial cameras) and perform a full 3D product profile using **3D technology** (laser profilometer). SENSURE solutions also allow for the inspection of the bottom part of products and can be integrated with moisture analysers.

Thanks to the flexibility of the solutions, it is possible to **integrate the vision systems into existing production lines and to customize rejection mechanisms**.

Vision systems can also be **installed in different positions of the line** (before/after oven, etc).

Using **SENSURE SYNAPSE ensures reliable, repeatable, and accurate measurements**, even at high line speed, with the added benefit of all data being saved in a SQL database. It is also possible to **automatically adjust the parameters of individual processing stages** based on the analysis of their outputs and product information.

## Defects detection capabilities

**Shape/Size**

**Color/Topping  
(Top surface)**

**Color  
(Bottom surface)**

## Customized single or multiple rejection mechanisms

Choosing the right rejection mechanism (air jet with nozzles, independent traps, retractable belts, robot, etc.) is important to ensure non-compliant products are accurately removed from the production line. To determine the most suitable option, it is important to consider several factors, such as: type and dimensions of product, how they are presented into the vision inspection system, line width and speed, space available, etc.
